ESSP

Employee Self Service Portal

A visual system for the employee-facing half of an enterprise HR platform — sign-in identity, dashboard palette, typography and accessibility.

An employee portal, audited end to end

ESSP is the employee-facing side of an enterprise HR platform — the screen a person opens to check attendance, apply for leave, and see who is celebrating a birthday. This case study documents the visual system behind two surfaces: a white-labelled sign-in built for the client’s brand, and a dense, warm dashboard built for daily use.

ROLE

UI design, design system, visual audit

TYPE

Enterprise web application
White-label deployment

SURFACES

Sign-in
Employee dashboard

DELIVERABLES

Palette tokens, type scale, component specs, WCAG audit

Three problems the screens revealed

01 Two systems, one product

Sign-in sits at 16–37% lightness. The dashboard sits at 61–94%. A user crosses fifty points of luminance in a single click, and not one brand colour survives the journey.

02 Colour without meaning

Four action pills use Bootstrap's contextual defaults verbatim. Blue, green, amber and purple differentiate four buttons — they do not signal four states.

03 An invisible attendance code

The COFF code renders in aqua on white: a contrast ratio of 1.25:1, in the calendar an employee reads to confirm they were paid correctly.

The sign-in screen

Navy to indigo across the diagonal, concentric orbit rings, and a single hot magenta in the client mark. The auth card floats on slate, clear of the gradient.

Brand indigo

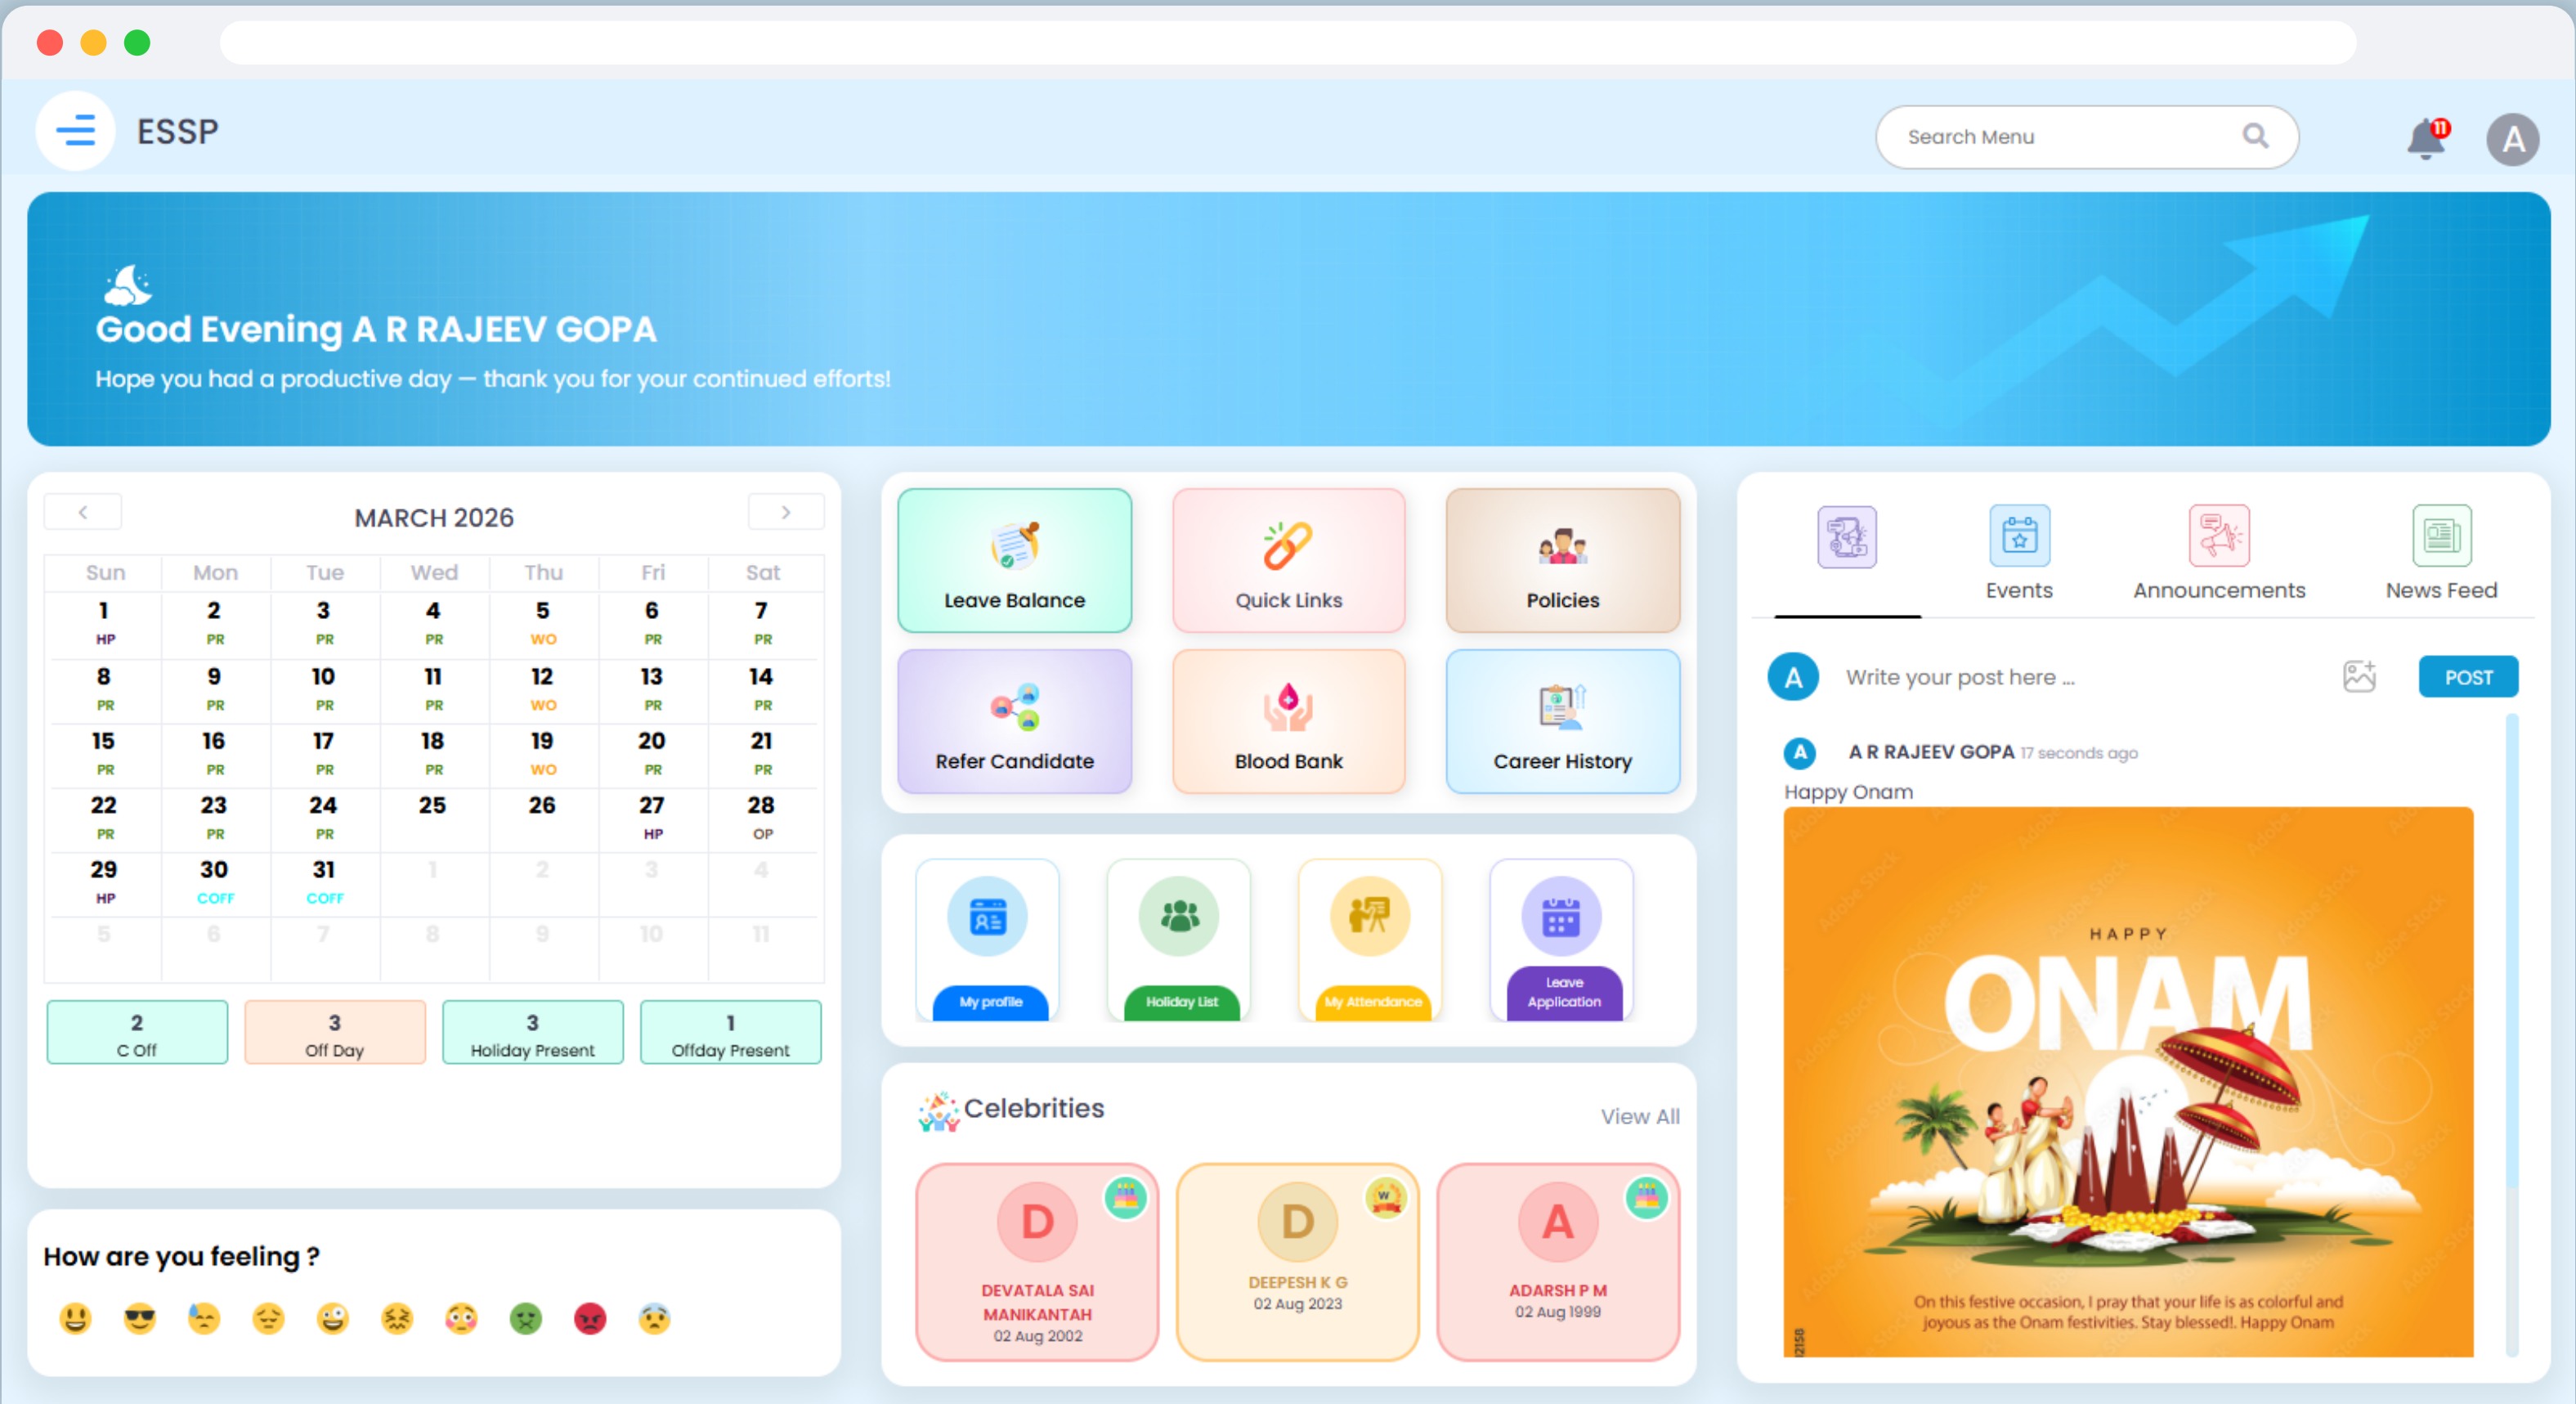

#ED008C
Brand magenta

#38BDF8
Sky accent

The employee dashboard

Three columns: personal data on the left, actions in the centre, the company wall on the right. Pale sky field, white cards, one full-width greeting gradient.

PERSONAL

Calendar, attendance codes, summary chips, mood check-in

ACTIONS

Six pastel tiles, four quick pills, celebrations strip

SOCIAL

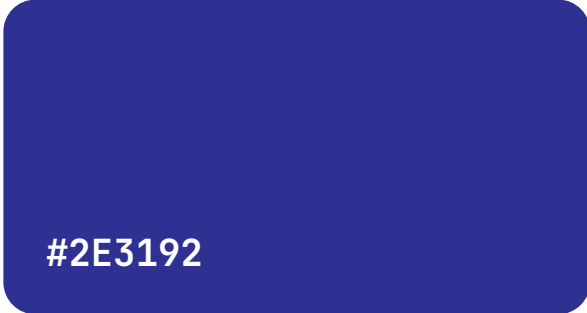

Posts, Events, Announcements, News Feed

COLOUR

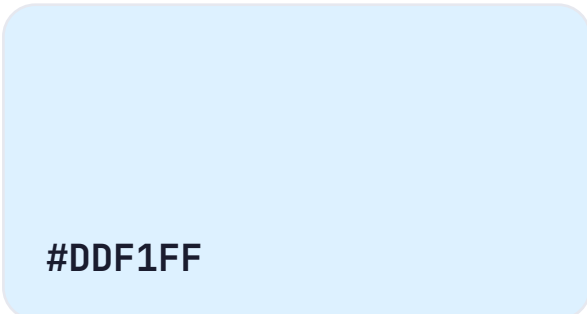

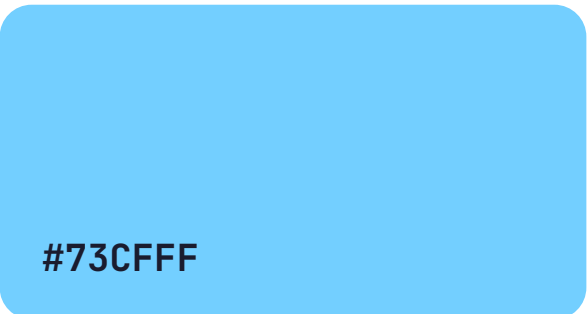

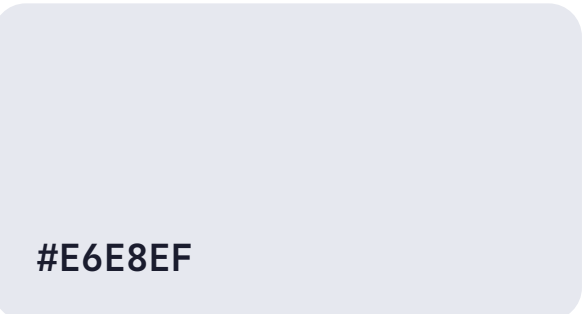

Two palettes, one product

Identity values are tenant-owned and change per deployment. Surface values are structural and fixed. Keeping them in separate layers is what makes white-labelling work.

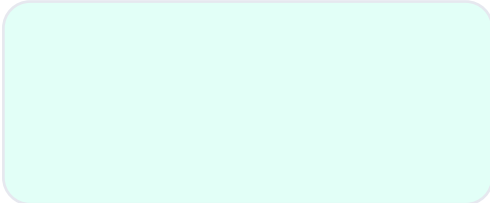

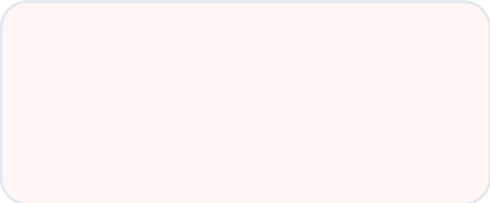

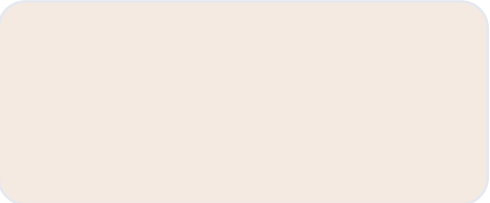

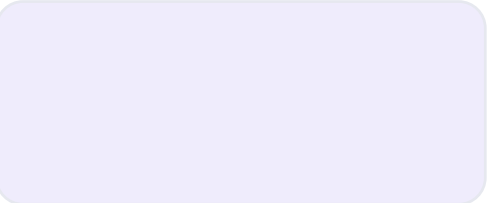

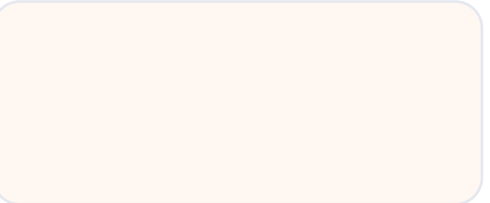

IDENTITY — TENANT OWNED

Pastel fill identifies the category. A 1 px border is required to hold the edge on white.

OP

Re-darkened so every code clears 4.5:1. Hue retained for recognition; only lightness changes.

SPACING — 4 PX BASE

One fix that mattered most

The COFF attendance code measured 1.25:1 against white — effectively invisible text in the calendar an employee uses to check their pay.

BEFORE · AQUA #00FFFF

30 **COFF**

1.25:1

FAIL

WCAG 2.1 AA requires 4.5:1 for body text

AFTER · TEAL #0B7285

30 **COFF**

5.59:1

PASS

WCAG 2.1 AA requires 4.5:1 for body text

- Hue is kept for recognition — only lightness changes, so the legend still reads as a colour system.
- Every code keeps its letters, so the calendar survives greyscale print and colour-blindness.
- Six pastel tiles gained a 1 px border to hold their edge against white cards.
