

HRIS — Alerts & Reminders

An exception-driven console for HR operations. Every element on screen is an outstanding action — nothing reports the past. Numbers are affordances, not decoration.

ROLE	TYPE	SURFACES	DELIVERABLES
UI design, design system, visual audit	Enterprise web app — 19-module HR platform	Sign-in, Alerts & Reminders console	Palette tokens, severity model, type scale, components

PAN No. missing 1,601 H	Probation completion pending 738 H	Employment PF variance 42 L	Loan approval pending 3 H
---	--	---	---

Same High chip on 1,601 and on 3 — severity encodes risk; never volume.

01 — OVERVIEW

A dashboard that shows what is still undone

Most HR dashboards report the past — headcount, attrition, last month's payroll. This console inverts that. A probation to confirm, a shift to allocate, a PAN number missing before payroll can clear: every tile is a task, not a stat.

- LIFECYCLE
Probation, joining, activation, resignation approvals
- TIME & ATTENDANCE
Shifts, off days, leave, WFH and on-duty approvals
- PAYROLL & STATUTORY
PAN, IFSC, UAN, PF and EPS variances

01 — THE CHALLENGE

Three problems the screens revealed

01 1,601 vs 3 A two-orders-of-magnitude spread One queue holds 1,601 items, another holds 3. A flat list can't carry that range — small queues vanish, big ones read as noise instead of a blocker.	02 31° apart Two surfaces, no shared colour Sign-in runs on teal at hue 183°; the console runs on green at 151°. Neither uses the logo's red. Brand does work on one screen and is abandoned on the next.	03 1.9:1 A palette with a contrast ceiling Amber and Butter fail entirely against white, clearing only 2.3:1 and 1.9:1 against ink — usable as a chip fill, unusable as text.

02 — PROCESS

The severity model

Volume and urgency are separate channels. A variance can wait a cycle; a missing PAN cannot clear payroll. Keeping the two independent is what makes a twenty-row column scannable in one downward pass.

Probation completion pending738H PAN No. missing1681H Personal details approval pending25M PF UAN missing15M Employment PF variance42L Loan approval pending3H	Never colour alone. Each severity is paired with a letter — H, M, L — so the state survives deuteranopia, where rose and forest converge, and greyscale print. Same chip, different reason. PAN No. missing (1,601) and Loan approval pending (3) both carry High — severity encodes statutory or blocking risk, not the size of the queue.

03 — FINAL SCREENS · SURFACE 01

The sign-in screen

An illustrated marketing field on the left, a floating auth card on the right. Teal carries the whole first impression — and hands none of it forward.

03 — FINAL SCREENS · SURFACE 02

The alerts console

Three scrollable columns grouped by the team that resolves them — lifecycle, time & attendance, payroll compliance — with a 19-module launcher one tap away.
